EDU 526 – Managing K-12 Adolescent Health Issues

**Designed with
School Nurses,
Healthcare
Professionals, and
Sports Coaches
in mind!**

There is a growing body of health related concerns affecting our K-12 students. These concerns vary from nutrition concerns, eating disorders, sexually transmitted diseases, general fitness, innate and acquired childhood diseases and concussions. Managing these health related issues include not only understanding the general workings of the individual disease processes but understanding both the secondary concerns and the anatomy and physiology driving these concerns. This course will provide a detailed working knowledge of anatomy and physiology aimed towards addressing some of the health concerns affecting our student population. Additional information will include developing plans to assist affected populations in succeeding in the academic environment.

Instructors: Dr. Ling Chang, Thom Stecher & Associates

Dates: February 15, 16, March 1 and 2, 2014

Location: Homewood Suites, Malvern, PA
